↩ Revert R

Next J

Why Overlook flagged it

- Changed outside the requested area.
- Other files import it, so their behaviour may change too.

The report says otherwise

Bob runs the audit. Git has the final say.

Auditor mode

```
/audit ../my-app <base> brief.docx
```

4 subagents in parallel. Writes only out/audit.json.

Fixer mode

```
/fix-forward <audit id>
```

Fixes inside the confirmed area. Never weakens a test.

real audits

The hosted demo runs no model: it shows the audit.json files Bob wrote. A new link is audited locally; without Bob it is a logic-only Draft audit.

Bob's proposal

Did the agent stay inside the request?

No: 4 of 6 files are outside

src/articles/

⚠️ proposed by Bob

Confirm

Edit area

3 more files import a changed file and may be affected.

Git's verdict

Is the agent's report true?

1 of 4 claims hold

× false

I only changed the article views.

× false

No API changes.

⚠️ partly true

All tests pass.

✓ holds

Article dates now show relative time.

► The agent's report

Overlook

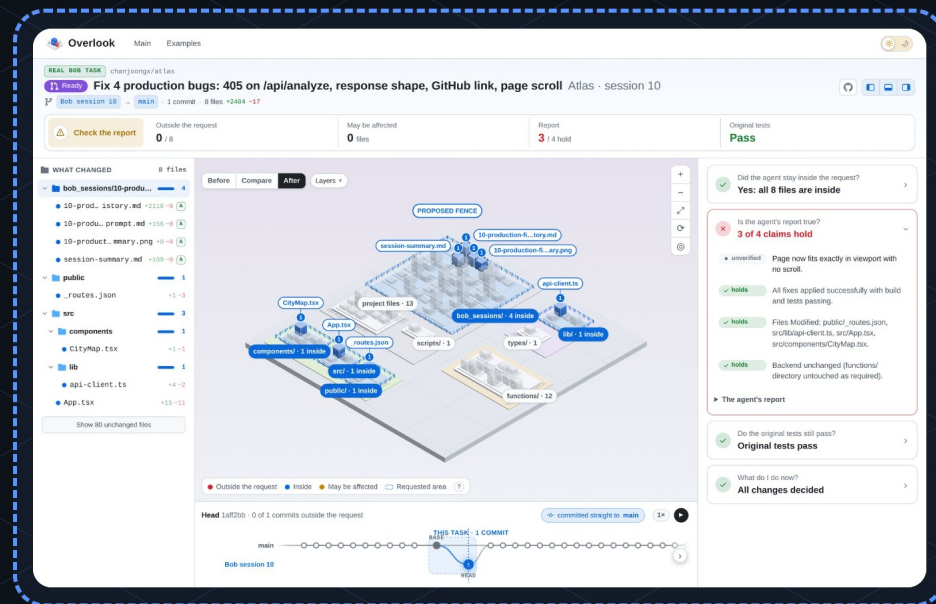

Nothing your AI changed gets overlooked.

"Speed without control and transparency is a liability."

Dinesh Nirmal, IBM

overlook-olive.vercel.app
